

1) a) `int arr[10];` - Declaration of array `arr` which has size 10.

b) `int n = 10;`  
`int arr2[n];`

obs :- Initialization of variable `n` with 10 and declaring array named `arr2` of size `n = 10`.

c) `int arr[] = {10, 20, 30, 40};`

obs :- Initialization of array named `arr` with values 10, 20, 30, 40.

d) `int arr[6] = {10, 20, 30, 40};`

obs :- Storing 4 values 10, 20, 30, 40 in array named `arr` of size 6.

e) `int arr[];`

obs :- Declaring array named "`arr`".

f) `int arr[5];`  
`arr[3/2] = 2;`

obs :- It means `arr[1] = 2`.

g) `int arr[2] = {10, 20, 30, 40, 50};`

obs :- Storing only 10 & 20 in array "`arr`".

```
h) int arr[2];  
printf("%d", arr[3]);  
printf("%d", arr[-2]);
```

obs :- output :- 0
